

Responsible use of AI Tools for Master's thesis at the department of Informatics, UiB

Advanced AI tools for generation of text are here to stay and used responsibly they can be of big help in many situations. But responsible use requires prior experience with self-produced text and self-produced ideas, otherwise you are letting the AI tools take over. The masters thesis is the main vehicle that we have for this in our department, where the student acquires the ability to work over long time with their own ideas in a long text they are writing themselves. This must be kept in mind by any responsible master student so that the outcomes in terms of your acquired abilities during the masters are maximized.

Guidance for students

The department expects the intellectual substance of the thesis, including research questions, argumentation, analysis, and conclusion, to be your own work. **You are fully responsible for everything included in the thesis.**

Use of AI must be transparent and documented. Your thesis should clearly demonstrate your academic competence and understanding, not that of an AI-system.

To ensure compliance, you must include a 'Statement on the use of AI tools' in your master's thesis. The statement must be specific to your use of such tools and be included in a separate page in the Appendix of your thesis.

Your statement should include, but not be limited to,

1. Transparency:

Declare if and how and which AI tools were used, summarized in the Appendix, and if convenient also at appropriate points in the general text.

2. The declaration should be ended with the following text "I am aware that I am responsible for all content of this master's thesis."

Further, you are additionally expected to

a. Know your work

Be prepared to explain every part of your thesis in your own words during the oral defense. Failure to do so will result in severe consequences for your grading.

b. Check your sources

Do not rely on AI for literature summaries; read and engage with original texts

c. Verify everything

Double-check all factual content, citations, and data that may have been AI-assisted

d. You are the author

You may use AI for grammar polishing, not for substantive drafting of arguments

e. Prepare to defend orally

Expect examiners to probe your understanding of the text. You can train for this in discussions with your supervisor and fellow students. The censor will be instructed to ask questions during the oral exam to uncover lack of understanding of your own text, and to take this into account when grading.

f. Consult your supervisor

If you are in doubt, consult your supervisor
